Relevant Experience

Global enterprise network company:

- Led assessments for the role of information in over a dozen transformational scope processes, including new business models. Value of new business models was in excess of \$50M annual revenue.
- Developed information governance quality framework based on emerging data standards. Value represented a potential savings of \$2M in reduced operating expense due to poor data quality.
- Delivered change management readiness assessments to support a \$100M+ multi-year initiative to adopt uniform enterprise business intelligence platform.
- Designed concept and requirements for an automated data confidence mark to be delivered into business intelligence reports on the fly. (Pilot project.)

Global engineering and construction management company: Developed and edited proposal documentation that helped assure the capture of millions of dollars for healthcare and transport projects.

Network television company: Led a team of animators and artists to deliver original show materials for use in broadcast and online. Was able to help launch a 24-hour news-oriented programming in three months.
